If you lose access to your Tuta Account, this code can help you recover it. To use it, visit <https://app.tuta.com> (or open the Tuta app on your computer or phone) and click on "Lost account access". Fill out your Email address and Recovery code, or press the "QR code" button to scan the QR code and automatically fill the fields. You can only use the QR code within the Tuta Apps. Other apps will not work. This will allow you to either set a new password, or remove a second factor from your Account.

Storage Tips

Because Tuta is end-to-end encrypted, we cannot help you regain access to your account if you lose your Recovery Kit. So make sure to remember where you keep it. Printing it out is a good option if you don't want to keep it on your computer.

This document contains all the information needed to log into your Tuta Account. Make sure to keep it in a secure location. We recommend using a password manager if you want to keep it electronically.
